Interface Metaphor (4 / 4 pts claimed)

Each prefab establishes an Interface Metaphor that unites its signifiers and mappings. List each prefab by its metaphor and signifiers, and each affordance with the signifiers that communicate it and how they connect to the metaphor. Graded 0-4 on how well this holds.

- 0:00 - i did thi thing
- 1:00 - I did another thing

Building Affordance (2 / 2 pts claimed)

Through an interaction, the player can spawn Instances (referred to as Buildings) at locations they specify, perhaps in exchange for a Resource.

- hihi

Gridded Buildings (0 / 2 pts claimed)

Requires Building Affordance. Built positions snap to a regular grid.

- test

Statted Instances: Prefab Content (03 / 4 pts claimed)

Prefabs scripted with Stats that change through interactions or time, with a visual indication of the Stats. Each counted prefab has at least three Affordances or Spatial Dynamics affecting it. List each prefab by name. 3 prefabs = 1 pt, 5 = 2 pts, 8 = 3 pts, 13 = 4 pts.

- 1
- 2
- 3

Statted Instances: Stat Content (2.5 / 5 pts claimed)

Total count of distinctly named Stats across all prefabs. List each Stat by name. 3 Stats = 1 pt, 5 = 2 pts, 8 = 3 pts, 13 = 4 pts, 21 = 5 pts.

- asdfasdf

Passive Stat Gain (0 / 2 pts claimed)

A prefab uses Euler Integration so its Instances passively advance a Stat over time.

- something something

Player Resource (2 / 6 pts claimed)

The player has Resources that change with events or time. Count of Resources visible in the video. 3 Resources = 1 pt, 5 = 2 pts, 8 = 3 pts, 13 = 4 pts, 21 = 5 pts, 34 = 6 pts.

- 1 - resrouce 1
- resource2
- 3 - resource 3
- 4 - resource4
- 5:00 - 5

Wild Instances (0 / 2 pts claimed)

Some Instances are generated randomly in the space when the game starts.

- df

Texture Animation Signifiers (0 / 2 pts claimed)

UV mapping is used to animate an object to signify its dynamics.

- df

Pop-up Tutorials (0 / 5 pts claimed)

When a player first encounters a new affordance or spatial dynamic, a textual signifier pops up next to the mechanic's object explaining it. 3 pop-ups = 1 pt, 5 = 2 pts, 8 = 3 pts, 13 = 4 pts, 21 = 5 pts.

- df

Harvesting Affordance (0 / 2 pts claimed)

Through a player interaction, the player gathers a class of Instances (Destroying it or reducing one of its Stats) in exchange for increasing a player Resource.

- (no response)

Caretaking Affordance (0 / 2 pts claimed)

Through a player interaction, the player boosts an Instance's Stats, optionally in exchange for decreasing a Resource or just freely from their effort.

- (no response)

Shatter Affordance (0 / 2 pts claimed)

Requires Harvesting Affordance. Through a player interaction, the player replaces one Instance with a different Instance that can be harvested.

- (no response)

Crafting Affordance Content (0 / 6 pts claimed)

Through player interactions, the player exchanges a decrease in some Resources for an increase in others. Count of exchange interactions available. 2 recipes = 1 pt, 3 = 2 pts, 5 = 3 pts, 8 = 4 pts, 13 = 5 pts, 21 = 6 pts.

- (no response)

Collisions (0 / 5 pts claimed)

A prefab has a script triggered when Instances of particular prefabs collide with it: one Instance is Destroyed and the other has its Stats changed. 1 collision script = 1 pt, 3 = 2 pts, 5 = 3 pts, 8 = 4 pts, 13 = 5 pts.

- (no response)

Neighbor Interactions (0 / 6 pts claimed)

Extends Gridded Buildings and Passive Stat Gain. Instances on neighboring grid positions have regularly recurring interactions that change both of their Stats. Cannot also count as a Collision Interaction. 1 interacting pair = 1 pt, 3 = 2 pts, 5 = 3 pts, 8 = 4 pts, 13 = 5 pts, 21 = 6 pts.

- (no response)

Foundation Buildings (0 / 2 pts claimed)

Building an Instance of one prefab at a location first requires an Instance of a different prefab to already be built there.

- (no response)

Death (0 / 2 pts claimed)

A Stat on certain Instances, when it drops to zero, causes that Instance to be Destroyed.

- (no response)

Intermittent Instances (0 / 1 pts claimed)

Requires Wild Instances. Some Instances are generated at random times during the game.

- (no response)

Path Following (0 / 1 pts claimed)

An Instance follows a designer-defined path other than a straight line, thats pre-defined by the designer.

- (no response)

Built Paths (0 / 1 pts claimed)

Extends Path Following and Gridded Buildings. The player builds pathway buildings on the grid, and other Instances flow down these "pathway" buildings.

- (no response)

Path Planning (0 / 2 pts claimed)

Requires Path Following. The Instance's path is dynamically planned around buildings using a planning algorithm.

- (no response)

Planning down Pathways (0 / 2 pts claimed)

Requires Built Paths and Path Planning. The path is planned only along pathway buildings.

- (no response)

Population Resource with Pathing (0 / 2 pts claimed)

Requires Path Planning. A population of Instances represents a player Resource: more are spawned as the Resource is gained. When the player consumes that resource, the instances path themselves to the point of use and despawn.

- (no response)

Solar Coaster (0 / 1 pts claimed)

Motion is simulated along a mesh strip by an increasing offset on the texture's UV coordinates of the texture map that increases over time.

- (no response)

Solar Blast (0 / 1 pts claimed)

Requires Solar Coaster. A blast effect is animated by scrolling UV coordinates over a circular mesh.

- (no response)

UV Distortion (0 / 2 pts claimed)

Wiggling, flapping, or blobby jiggling is animated on a texture by scrolling a second noise texture and using the noise to displace the UV coordinates of the first texture

- (no response)

Total claimed: 13.5
